

Westfield Memorial Public Library

A Makerspace Built Around Community, Creativity, and Confidence

AT A GLANCE

Library:

Westfield Memorial Public Library

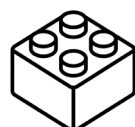

Interviewed:

- **Genny Girvan**, Emerging Technologies Librarian
- **Kiana Kirby**, Head of Technology and Technical Services

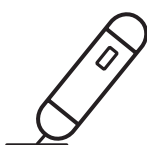

Featured Solutions

SMART Board
Interactive Display

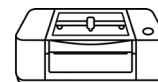

LEGO[®]
Education SPIKE™

3Doodler

Cubelets

Glowforge

Bambu 3D Printer

The Vision

When Westfield Memorial Public Library transformed former staff offices into a makerspace, the goal was more than installing new technology.

The team wanted to create a welcoming space where people of all ages could explore, experiment, and build confidence through hands-on learning.

As Makerspace Librarian Genny explains,

I don't want it to be just a room. I want it to have a philosophy.

Bringing Learning to Life

At the center of many programs is the SMART Board, which helps turn demonstrations into interactive experiences.

Whether participants are coding LEGO[®] Education SPIKE™, designing Glowforge projects, or learning how to access digital resources like Libby, the SMART Board allows everyone to follow along, collaborate, and participate together.

For younger learners, the touchscreen makes coding and problem-solving more intuitive, while adults appreciate seeing apps and interactive tools displayed in a familiar, easy-to-follow format.

Instead of standing at the front of the room delivering presentations, library staff create experiences where patrons can explore alongside one another.

A Space That Gives Back

Perhaps the makerspace's greatest success isn't measured by the technology inside it, but by the community it inspires.

This summer, local high school students volunteered to design and lead a free STEM camp for elementary and middle school students. Using the makerspace and its resources, they created lessons in robotics, aviation, engineering, and game design, transforming the library into a place where learners become teachers and ideas become community service.

Community Impact

The makerspace continues to attract families, teens, and adults looking to try something new.

Parents have shared that the space gives children another place to connect with friends outside of sports, while adults enjoy exploring tools and technologies they might not have access to. More importantly, the space encourages curiosity, resilience, and creativity, reminding visitors that it's okay to experiment, troubleshoot, and learn together.

“We're creating access to equipment, tools, community, and knowledge, while helping people leave feeling empowered that they can do it themselves.”
